

Problem Set 4: Data Structures

Released 21 February 2024

Due 28 Feb 2024 10:30pm in Gradescope

Instructions. You may discuss the material with your classmates, but you must write solutions yourself. List collaborators on your submission. Do not use other sources of help other than the course staff and the textbook.

If you are asked to design an algorithm, please provide: (a) the pseudocode or precise description in words of the algorithm, (b) an explanation of the intuition for the algorithm, (c) a proof of correctness, (d) the running time of your algorithm and (e) justification for your running time analysis.

Submissions. Please submit a PDF file typed using L^AT_EX. Please assign pages to questions in Gradescope.

1. **6.1-1, 6.1-2, 6.1-3** Heap Structure

2. **6.1-6, 6.2-5** Heap Understanding

3. **6.2-3** Generalizing to Min Heaps

4. **11-2a** Searching a Static Set

5. When would you choose to solve collisions with probing vs chaining? What are the advantages/disadvantages of each

Bonus (token opportunity). **6-3abf** Young Tableaus
